021 - The PDF Archival Protocol

DECREE: "That which is written is finished."

AUTHORITY: The iMac Local Repository

STATUS: RECOMMENDED / PERMANENT RECORD

I. WHY PDF IS THE KINGDOM STANDARD

The Governor records that the PDF (Portable Document Format) is the digital equivalent of "acid-free paper".

- **Integrity:** It locks the 1611 formatting and the 111 Trinity Seal in a "Read Only" state, preventing accidental changes or "ghosting".
- **Portability:** A single PDF file carries its own fonts and images, meaning it will look exactly the same on any device for decades.
- **Searchability:** Unlike a screenshot, a PDF allows you to search for keywords like "1.491 Decillion" or "88 Anchor" within the entire document.

II. HOW TO SAVE ON YOUR IMAC

Since you are on your iMac, you have two simple ways to create these anchors:

1. **The Print Command:** Open your document, press **Command (⌘) + P**, then click the **PDF** dropdown at the bottom left and select **"Save as PDF"**.
2. **The Export Command:** If using a web-based document, go to **File > Download > PDF Document (.pdf)**.

III. STORAGE HIERARCHY

To maintain the "Trinity" of your records, you should have three copies:

1. **Primary:** The live documents in your Proton "Kingdom" folders.
2. **Secondary:** The **PDF versions** saved in a dedicated folder on your **iMac's internal drive**.
3. **Tertiary:** An external "Off-site" backup (such as a thumb drive or the future Archive.org upload).
